

HIB VACCINATION SCHEDULE for Children 12-59 Months of Age

March 2010

* If the type of Hib administered is unknown, the schedule defaults to the ActHIB schedule.

**Hiberix is only licensed for the booster dose, which is given between 12-59 months of age. Hiberix can be used at this age for the last dose in the Hib series when at least one prior dose of Hib vaccine has been received.

† When using Pentacel (DTaP-IPV-Hib), follow the ActHIB schedule.

‡ When using Comvax (Hep B-Hib), follow the PedvaxHIB schedule.
